# Management and Marketing Options in the face of the COVID-19 Pandemic

## Marketing and Management Questions

- Fall Calving Herds
- Spring Calving Herds
- Herds with both Fall and Spring Calving herds
  - Or considering it

## Best Management Practices

• In abnormal times you have to consider doing things abnormally

But

• In tough economic times all of the best management practices become even more important

## Producers must stay informed and agile

- Marketing prices for cull cows and feeder calves have fluctuated wildly with the COVID 19 pandemic
- Demand for cull cows vs ability to slaughter
- Feeder calf value
  - Grass fever
  - Grass cattle vs feedlot cattle

### What are the things to think about?

- Limit input costs but not those that:
  - increase number of live calves
  - increase calf weight gain
- Make sure you are in position to maximize forage usage.
  - Correct stocking density
  - Good hay production
    - · Quantity and quality
- Depending on economic factors by-product feeds may have highly variable availability and price

### Current marketing challenges

- Huge swings in cull cow prices
  - Up and down
- Moderate to significant variation in feeder calf prices
  - Mostly down

## Cull Cow marketing

- Producers need to work hard to stay informed about demand for slaughter cows
- Cull cow market has swung from huge demand and very good prices to no demand

## Fall calving herds Decision making

- Calf weaning time coming up
  - Selecting and marketing cull cows
  - Selecting replacement heifer
- Should I keep some of my "cull cows" instead of heifers?
- Should I keep more heifers if prices are down?
- Should I do both?
- What about retained ownership?

## Market Price Ranges

#### 700# backgrounded heifers

<u>Pr</u>	ice/lb	<b>Total Dollars</b>							
\$	0.90	\$ 630.00							
\$	0.95	\$ 665.00							
\$	1.00	\$ 700.00							
\$	1.05	\$ 735.00							
\$	1.10	\$ 770.00							
\$	1.15	\$ 805.00							
\$	1.20	\$ 840.00							

\$ 1.20

#### 1200# Cull cow values

Pr	ice/lb	<b>Total Dollars</b>								
\$	0.35	\$ 420.00								
\$	0.40	\$ 480.00								
\$	0.45	\$ 540.00								
\$	0.50	\$ 600.00								
\$	0.55	\$ 660.00								
\$	0.60	\$ 720.00								
\$	0.65	\$ 780.00								
\$	0.70	\$ 840.00								

#### Cull Cow Price – feeder heifer price **Cull Cow Price** 0.35 \$ 0.40 \$ 0.45 \$ 0.50 \$ 0.55 \$ 0.60 \$ 0.65 \$ 0.70 \$(210.00) \$(150.00) \$ (90.00) \$ 30.00) \$ 30.00 \$ 90.00 \$ 150.00 \$ 210.00 \$ 0.90 \$ 0.95 \$(245.00) \$(185.00) \$(125.00) \$ 55.00) \$ (5.00) \$ 55.00 \$ 115.00 \$ 175.00 \$(280.00) \$(220.00) \$(160.00) \$(1 0.00) \$ (40.00) \$ 20.00 \$ 80.00 \$ 140.00 \$ 1.00 Heifer Price \$(315.00) \$(255.00) \$(195.00) \$(1 5.00) \$ (75.00) \$ (15.00) \$ 45.00 \$ 105.00 \$ 1.05 \$(350.00) \$(290.00) \$(230.00) \$(1 0.00) \$(110.00) \$ (50.00) \$ 10.00 \$ 70.00 \$ 1.10 5.00) \$(145.00) \$ (85.00) \$ (25.00) \$ 35.00 \$(385.00) \$(325.00) \$(265.00) \$ 1.15

# Selling cull cows vs retaining backgrounded heifers

- Under "typical" prices it costs a producer \$240 in opportunity cost to keep a replacement heifer to replace a cull cow
- Under most potential prices for cull cows and backgrounded heifer producers would be better off to sell cull cows
- There are some cull cows that need to go
- There are some young open cows and 50/50 culls that need to be evaluated depending on market conditions

If selling unweaned heifer calves to the market then under most market conditions cull cows will sell for more

# What did we learn from 2014-2015 price fluctuations?

- 2014 calf prices lead everyone to keep any cow that got pregnant no matter how old, thin or crappy she was
- Fall 2015 not only were calf prices down but weaning weights were down as well.
  - Lost some of those cows as in the winter of 2014-15 as well
- Some cull cows are cull cows for a reason and should be culled in almost any economic situation

# What about the strategy of keeping lots of "cheap" heifers as replacements

### **Pros**

- Opportunity to decrease age of cow herd
- Opportunity to market more heifers in future when market is higher

#### **Cons**

- Increased cost to raise heifers
- Increased need for heifer bulls
- Increased need to watch heifers calving

# Spring calving herds Decision making

 Consider keeping young cows that have lost calves if cull prices are low

Or

• Sell all cows that have lost calves if cull prices are high

## Spring calving herds Decision making

- Cows that have lost calves
- Why did the cow lose her calf?
  - Her fault
    - Poor udder
    - Very thin
  - Not her fault
    - Dystocia
    - Scours?
    - Bad luck

## Herds with Fall and Spring calving herds

• Consider breeding open, young fall cows in the spring

### Take Home Points

- At some point you have to make the best decision you can and go with it.
- Not making a decision is making a decision
- Doing the same thing you have always done may or may not be the right decision
- Do everything you can to stay informed and be prepared to act when appropiate

### **Next Session**

- Stocker calves
  - · Marketing and Management decision making
- Backgrounding fall calves
  - Marketing and management decision making
